SUMMARY

Final-year B.Tech Computer Science (AI/ML) student who ships real software: a Chrome Web Store extension with about 2,000 active users, a live CSV data-pipeline service, analytics dashboards and computer-vision systems. Strong in Python, Java and JavaScript/TypeScript, with hands-on AWS, Docker and ML experiment tracking. Seeking a software engineering role in backend, full-stack, data or applied ML.

EDUCATION

SRM Institute of Science and Technology, B.Tech in Computer Science and Engineering (AI/ML) — Expected 2027
CGPA: 8.69 / 10.0

Study Hall School, Lucknow: Senior Secondary (Class XII), 72.2% — 2023
GD Goenka Public School, Lucknow: Secondary (Class X), 92.2% — 2021

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, SQL, Bash
Web and Backend: React, Next.js, Node.js, Express, Flask, Redux, REST APIs, Chrome Extensions (Manifest V3), Webpack
AI/ML and Data: TensorFlow, YOLOv8, scikit-learn, MLflow, Computer Vision, Deep Learning, RAG, Vector Databases, Pandas, NumPy, Apache Spark, Power BI
Cloud and DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Terraform, Grafana, Prometheus, Linux, Git, GitHub
Databases: PostgreSQL, MySQL, MongoDB
Testing and Tools: Selenium, TestNG, Postman, Jupyter, IntelliJ

PROJECTS

SRM Auto Login | JavaScript, Chrome Manifest V3, Webpack, Chrome Storage API — Chrome Web Store
- Shipped a Manifest V3 extension that automates campus-network captive-portal login for **about 2,000 active users**; owned the product from requirements through testing, review-compliance documentation and multiple store submission cycles.
- Detects portal redirects with DOM observation and injected scripts, keeps credentials strictly on-device via the Chrome Storage API, and uses background service workers to handle concurrent network-state changes.

Veriflow: CSV Validation and Transformation Service | Node.js, Express, REST APIs — veriflow.f4w4z.dev
- Rebuilt my Java Streams-based Data Scaler engine as a web service that profiles columns, validates, cleans and transforms CSVs (one-hot, label and frequency encoding) for uploads up to 100 MB.
- Designed the REST API with per-IP rate limiting, expiring 30-minute download links and a production deployment path using PM2, Nginx and Let's Encrypt.

ATP Analytics: Player Comparison Dashboard | JavaScript, HTML, CSS — tennis.f4w4z.dev
- Analyzed **65,974 ATP matches (2000 to 2025)** across 50 players and built a zero-dependency, single-file dashboard for head-to-head records, titles by tournament level, surface performance and conditional win rates.

IPL Dashboard (2008 to 2024) | Python, Pandas, Seaborn, Power BI — GitHub
- Cleaned and analyzed **1,095 matches and 260,920 deliveries** in a five-notebook pipeline, then built a 5-page interactive Power BI dashboard with slicers and cross-page navigation.

Project Eagle-Eye: AI-Powered Disaster Rescue | Python, TensorFlow, YOLOv8 — 2025
- Built a YOLOv8 object-detection pipeline to locate human survivors in debris from drone footage and optimized inference for low-latency edge processing.

Cloud Infrastructure Stability Analysis | Python, scikit-learn, MLflow, Flask, AWS EC2 — 2025
- Detected anomalies in simulated cloud-performance metrics with Z-score and Isolation Forest methods, tracked experiments in MLflow and deployed a Flask dashboard on AWS EC2 for stakeholder access.

Interchronos: Astronomy Events Explorer | TypeScript, React, Wikipedia REST API — 2025
- Built a React/TypeScript single-page app with custom caching hooks for Wikipedia payloads and a keyword classifier that filters historical astronomical events.

CERTIFICATIONS

AWS Certified Cloud Practitioner, AWS, 2026
GitHub Copilot, Microsoft, 2026
Data Analytics Using Python, NPTEL, 2026
Networking Basics, Cisco, 2025
AWS Academy Graduate, AWS Academy, 2026
SAP Generative AI Developer, SAP, 2026
Introduction to Machine Learning, NPTEL, 2025
